

SUMMARY

Computer Science student who's spent the last few months building agentic AI systems that actually get used - across marketing, lead generation, and operations for real clients. I've worked across product, marketing, and AI automation, so I don't get stuck in one corner of a problem. I understand ROI, not just output. I ask a lot of questions, especially when I don't understand something, because I'd rather look less smart in the room than build the wrong thing.

EXPERIENCE

Agentic AI Intern | Oyelabs | Mar - May 2026

- Built AI agents for client projects using n8n, Supabase, and LLM apis
- Designed a global prompt framework that cross-checked SOPs before workflows ran, saved the manager a full day a week of manual validation
- Handled prompt engineering across multiple client projects and kept documentation clean enough that handoffs actually worked

Technology, Marketing & Operations Associate | Akroventures | Apr 2026 - Present

- Built the entire digital operation from scratch, no-code website, lead gen tooling, automated email outreach
- Built a content pipeline that pulls from news sources daily and surfaces ready-to-post options, saves ~10 hrs/week
- Building an investment sourcing system that pulls from Crunchbase and Google News, filters for investable companies, and triggers first outreach email automatically

Marketing & AI Automation Intern | Halo Interiors LLC | Nov 2025

- Automated cross-platform video processing using AI workflows, removing most of the manual work
- Tested Convex, Supabase, and Firebase to figure out what would hold at scale
- Documented everything, what broke, what worked - so the next person didn't start from zero

Product Intern | ScoutNexa | Feb - Mar 2026

- Researched competitors across Crunchbase to sharpen the product problem statement
 - Shipped an MVP in a few weeks using no-code tools, talked to early users, iterated
 - Founder shut the company down, got a real lesson in how fast things move at early stage
-

PROJECTS

AI Video Automation Agents | Halo Interiors LLC | 2025

- Built automated agents using Claude and n8n for video download, metadata extraction, captioning, and CSV/Markdown generation
- Debugged API rate limits and tool mismatches, restructured logic into modules so the whole thing actually stayed stable
- Explored extensions for educational content ingestion and structured knowledge extraction

AI Lead Qualification & Quotation Pipeline | Oyelabs | 2026

- Built an end-to-end client onboarding workflow, form submission triggers a second form via email, checks Supabase for existing leads, then classifies them as hot, warm, or cold using an AI layer
 - Generated AI-written quotations from lead data and preliminary info, sent to the manager for approval before going to the customer
 - Integrated Stripe workflow and automated manager notifications so nothing needed manual chasing
-

SKILLS

- AI & Automation: Claude Code/Cowork, prompt engineering, agent workflow design, n8n, openClaw
 - Marketing & Growth: Instagram and LinkedIn strategy, SEO and GEO, blogs
 - Technical/Development: Python, Java, React, JavaScript, REST APIs, SQL
 - CS Fundamentals: OOP, DBMS, Operating Systems, Computer Networks
 - Tools: Git & GitHub, Google Sheets/Docs, Canva
-

EDUCATION

B.E. Computer Science & Engineering
Thapar Institute of Engineering & Technology (TIET) | 2022 - 2026
